Pool heat pumps will work just fine in California. As long as the ambient air temperature is 50 degrees or above, a pool heat pump has heat to extract from the air and transfer to your pool water. For dry climates, adjust for the lack of humidity by making sure to adjust the size of pool heat pump.

Pool Heat Pumps extract heat from the air. A fan inside the heater draws ambient temperature air into the heater to an evaporator. The refrigerant inside the evaporator turns from a liquid to gas as the air enters the heater. A compressor moves the gaseous refrigerant through a series of tubes which creates heat.
