Ronindo

Viruses can infect all types of life forms, from animals and plants to microorganisms, including bacteria and archaea. Viruses exist in the form of independent particles, or virions, consisting of: (1) the genetic material, (2) a protein coat, (3) an outside envelope. Viruses can be transmitted through disease-bearing organisms

Read PDF Biology 2 Bacteria And Virus Test Answers

Ronindo

Bacteria are single-celled organisms that reproduce asexually independently of other organisms. Viruses require the aid of a living cell in order to reproduce.

Where They Are Found Bacteria:

Bacteria live almost anywhere including within other organisms, on other organisms, and on inorganic surfaces.
