CDASH: A MUST FOR EDC TRIALS. LIFE SCIENCE I TECHNICAL BULLETIN ISSUE N°44 / MARCH 2011. CDISC and EDC are 2 acronyms that hardly need an introduction these days. EDC (Electronic Data Capture) is a widely accepted alternative for paper trials, and has numerous advantages such as: immediate access to both trial data and trial status reports via the web, improved data quality by auto-queries that are sent by the EDC system as soon as data is entered, full control over the time point that ...

CDASH: A Must for EDC Trials

Simplifies transmission and sharing of data between partners. CDASH naming conventions: The goal is to have end-to-end traceability of the variable name from the data capture system to the SDTM datasets. In some EDC systems, the variable name may have "system" components that become part of the item's identifier.

Once already initiated, clinical studies that have not utilized CDASH are difficult to map in the SDTM format. In addition, most electronic data capture (EDC) systems are not equipped to export data in SDTM format; therefore, in many cases, statistical software is used to generate SDTM datasets from accumulated clinical data.

is a computerized system designed for the collection of clinical data in electronic format for use mainly in human clinical trials. EDC replaces the traditional paper-based data collection methodology to streamline data collection and expedite the time to market for drugs and medical devices.

Electronic data capture - Wikipedia

According to the PhRMA-Gartner-CDISC project, there is a per study cycle time reduction of 8.1 months and a per study cost savings of \$9 million, when standards are implemented in the study startup stage. CDISC and CDASH standards provide reusability and scalability to EDC (electronic data capture) trials.
