If you're looking for some fun fiction to enjoy on an Android device, Google's bookshop is worth a look, but Play Books feel like something of an afterthought compared to the well developed Play Music.

Dialysis Manual

In manual intermittent peritoneal dialysis, bags containing dialysate are warmed to body temperature and infused into the peritoneal (abdominal) cavity, which takes about 10 minutes. The dialysate is allowed to remain there (dwell time) for 60 to 90 minutes and then is drained out in about 10 to 20 minutes. This process is then repeated.

Dialysis - Merck Manuals Consumer Version

This manual is organized to systematically guide a patient-care specialist through the set up, operation, and clean up of the 2008K hemodialysis machine in daily use. The book begins with an overview that introduces the operator to the major components and describes how they are organized on the machine.

The dialysate absorbs waste products from blood vessels in your abdominal lining (peritoneum) and then is drawn back out of your body and discarded. Peritoneal dialysis (per-ih-toe-NEE-ul die-AL-uh-sis) is a way to remove waste products from your blood when your kidneys can't adequately do the job any longer.

Peritoneal dialysis - Mayo Clinic

You place about 2 quarts of cleansing fluid into your abdomen and, later, drain it. This is done by connecting a plastic bag of the fluid, called dialysate, to the soft tube (PD catheter) in your abdomen. By raising the plastic bag to shoulder level, gravity pulls the fluid into your abdomen. This is called "filling."

WHEN TO START DIALYSIS. Kidney failure is the last stage of long-term (chronic) kidney disease. This is when your kidneys can no longer support your body's needs. Your doctor will discuss dialysis with you before you need it. In most cases, you will go on dialysis when you have only 10% to 15% of your kidney function left.
