In this lab, students learn and apply techniques for analyzing the forms and structures of organisms — in particular, the pelvic structures of the threespine stickleback fish (*Gasterosteus aculeatus*), a model organism for studying evolution. The lab includes three modules in which students collect and analyze data using photographs of living ...

Stickleback Evolution Virtual Lab - HHMI BioInteractive

Answer: Natural selection. Natural selection is a process where organisms that are better adapted to an environment will survive and reproduce. This means that the advantageous alleles of this variant organism are passed on to offspring. Over many generations, the process of natural selection leads to evolution occurring.
