Female ejaculation is the expulsion of fluid in a noticeable amount from the urethra of women during orgasm. It is estimated that between ten percent and forty percent of women are able to ejaculate.

The truth about female ejaculation | Health24

Okay everyone, it's time to talk about female ejaculation - because it's not as mysterious as many would like to believe. Scientists have found evidence that women who 'squirt' are expelling one of two different types of liquid - one pure urine, and the other a combination of urine and fluid from the female prostate gland.
