gases by the presence of a surface. As fluids have no rigidity, they fail to support a shear stress. When a fluid is subjected to a shear stress, the layers of the fluid slide relative to each other.

Fluid Statics -Study Material for IIT JEE | askIITians

Fluid statics is the study of fluid problems in which there is no relative motion

Read Free Fluid Statics Problems And Solutions

between fluid elements. With no relative motion between individual elements (and thus no velocity gradients), no shear can exist, whatever the viscosity of the fluid is.

Accordingly, viscosity has no effect in static problems and exact analytical solutions to such problems are

For a fluid in motion, the volume flow rate gives the volume of fluid that passes a cross section per unit time and is given by Av , where A is the cross-sectional area of the tube and v is the fluid speed. Bernoulli's equation is used to solve some problems. It relates conditions (density, fluid speed,
