Guided Imagery

You may want to use ambient sounds that compliment your imagery. This way, you feel more immersed in your 'environment',... You may also want to set an alarm, just in case you lose track of time or fall asleep. This way, you'll be more able to... As you get more practiced, you'll be able to go more ...

Guided Imagery for Relaxation and Stress Management

Guided imagery (sometimes called guided meditation, visualization, mental rehearsal, and guided self-hypnosis) is a gentle but powerful technique that focuses the imagination in proactive, positive ways. It can be as simple as an athlete's 5-second pause, just before leaping off the diving board, imagining how a perfect dive feels when slicing through the water.

What is Guided Imagery? | Health Journeys

Guided imagery (also known as guided affective imagery, or katathym-imaginative psychotherapy (KIP)) is a mind-body intervention by which a trained practitioner or teacher helps a participant or patient to evoke and generate mental images that simulate or re-create the sensory perception of sights, sounds, tastes, smells, movements, and images associated with touch, such as texture, temperature, and pressure, as well as imaginative or mental content that the participant or patient ...

Guided imagery - Wikipedia

Guided imagery is a form of focused relaxation that helps create harmony between the mind and body. It is a way of focusing your imagination to create calm, peaceful images in your mind, thereby providing a "mental escape.". Guided imagery provides a powerful psychological strategy that enhances a person's coping skills.

Guided Imagery | Center for Integrative & Lifestyle Medicine

Guided imagery is a focused practice that involves each of the five senses to ignite positive healing messages throughout the mind and body. The practice is often interchanged with visualization, self-hypnosis and guided meditation, but it has its own set of techniques. The benefits of guided imagery are vast — there is research that shows the practice can reduce fear and anxiety, lessen the frequency of headaches and has been proven to decrease psychological distress in cancer patients.
