Head Neck And Dental Anatomy

Skin. The head and neck is covered in skin and its appendages, termed the integumentary system. These include hair, sweat glands, sebaceous glands, and sensory nerves. The skin is made up of three microscopic layers: epidermis, dermis, and hypodermis. The epidermis is composed of stratified squamous epithelium and is divided into the following five sublayers or strata, listed in order from outer ...

Head and neck anatomy - Wikipedia

Applied Anatomy of the Neck as it Relates to Head and Neck Infections - Part 1 of 2 In this lecture Dr Bagheri will describe basic and surgically relevant head and neck anatomy as it pertains to routine oral surgical procedures. Relates to Head and Neck ...

Head and neck anatomy is important when considering pathology affecting the same area. In radiology, the 'head and neck' refers to all the anatomical structures in this region excluding the central nervous system, that is, the brain and spinal cord and their associated vascular structures and encasing membranes i.e. the meninges.

Head and neck anatomy | Radiology Reference Article ...

The nerves of the head and neck include the most vital and important organs of the nervous system — the brain and spinal cord — as well as the organs of the special senses. In addition, in this region we also find the major cranial and spinal nerves that connect the central nervous system to the organs, skin, and muscles of the head and neck.
