The throttle position sensor (TPS) on the 2002, 2003, and 2004 2.4L Honda CR-V is a simple 3 wire fuel system component that can be easily tested with just a multimeter (yup, no scan tool needed!). In this tutorial I will explain the TPS test that you need to perform to make sure that it is defective (or not).

Part 1 -How To Test The TPS (2002-2004 2.4L Honda CR-V)

Attach the battery positive terminal to the No. 4 terminal and the battery negative terminal to the No. 8 terminal of the main relay. Then check for continuity, using a circuit tester or multimeter, between the No. 5 terminal and No. 7 terminal of the main relay. If there is continuity, go on to Step 3.

This voltage test result tells you that the alternator is working (charging the battery). No further testing is required, since this multimeter test result eliminates the alternator on your Honda Civic as bad. Now, if you're having to jump-start the car to get it going, this test result points to a bad battery or a parasitic drain.

Part 1 -How to Test the Alternator (2001-2005 1.7L Honda ...

Test for battery voltage at the alternator on the charging lug located on the back of the alternator. The charging lug will have a large gauge wire, covered by a rubber boot, bolted to it that supplies power to the rest of the vehicle when the engine is running. Touch the red test lead to the charging lug and the black test lead to the engine block.
