Despite the importance of extrusion as a process, little is known about the flow of extrusion pastes. The advent of injection moulding for paste systems means that this lack of knowledge needs to be addressed.

the co-extrusion of pastes such as in the manufacture of micro-tubular solid oxide fuel cells . In such applications where the relative feed rates of the streams are fixed such that they cannot be controlled separately, the promotion of plug flow due to wall slip is necessary to obtain a stable laminate geometry.
