The schema therapy approach draws from cognitive-behavioral therapy, attachment theory, psychodynamic concepts, and emotion-focused therapies. In comparison to cognitive-behavioral therapy, schema therapy emphasizes lifelong patterns, affective change techniques, and the therapy relationship, with special emphasis on limited and adaptive re-parenting.

2-Day: Schema Therapy - PESI

Schema therapy is a 'third wave' cognitive therapy that was developed by Dr Jeffrey Young in the Eighties to help those clients that the standard CBT model just could not reach. Young's original model focused on clients with borderline personality disorder, proving highly effective with this hard-to-treat clinical population.

Schema therapy is a relational, attachment-based approach. We can clearly see the integration of psychodynamic psychotherapy here – when developing his model, Jeffrey Young knew that 10-20 sessions of CBT would not work for more complex clients. Instead, they needed a slower-paced, long-term ‘corrective emotional experience’.
