A stock having a lower float means that there are fewer shares to be actively traded, often resulting in lower liquidity. A low-float stock is often more volatile as it takes less buying or selling power to push the price around, due to the stock being less liquid.

What Is Stock Liquidity? (Amazing Infographic)

In the market, liquidity has a slightly different meaning. The market for a stock is said to be liquid if the shares can be rapidly sold and the act of selling has little impact on the stock's price. Generally, this translates to where the shares are traded and the level of interest that investors have in the company.
